Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Objections

Claim 1 is objected to because of the following informalities:

In line 4, it appears that "grass" should be --glass--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,489,995 to Iso et al. (Iso).

With respect to claim 1, Iso discloses an image sensor comprising a glass plate 205 for passing through the light reflected from a document arranged at a predetermined distance from said glass plate; a light source 209 for illuminating the surface of a document to be read through said glass plate; a lens 207 for focusing, to a predetermined position, light emitted from said light source and reflected from the reading surface of the document; an image reading device 203 for converting the light reflected from the document and passing said lens into image read-out information; a housing 201 accommodating and supporting said glass plate, said light source, said

Art Unit: 2878

lens and said image reading device in a predetermined position and formed to have a length greater than a width of the document; and a deformation preventing device 222 formed along the lengthwise direction of said housing and reinforcing rigidity of said housing to thereby prevent said housing from deflecting perpendicularly to the lengthwise direction, thereby keeping the interval between surface of the document to be read and said image reading device constant at the focal length.

With respect to claim 6, because of the nature of contact type image sensors, Iso inherently includes a document inserting inlet for inserting a document for image reading from the outside; a roller for transporting the document inserted from said document inserting inlet; and a read-out image information output device for outputting image information read out by said image sensor to the outside.

Allowable Subject Matter

Claims 2-5, 7 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephone B. Allen whose telephone number is 571-272-2434. The examiner can normally be reached on M-F 08:30-5:00PM.
